Monoclonal Antibody to Cytokeratin (Pan-reactive) Phycoerythrin (PE) conjugated (0.1 mg)

Clone: C-11
Isotype: Mouse IgG1
Specificity: The antibody C-11 reacts with Cytokeratin peptides 4, 5, 6, 8, 10, 13, 18. Cytokeratins are a member of intermediate filaments subfamily represented in epithelial tissues.

Regulatory Status: RUO
Immunogen: Keratin-enriched preparation from human epidermoid carcinoma cell line A431.
Species Reactivity: Mammalian
Preparation: The purified antibody is conjugated with R-Phycoerythrin (PE) under optimum conditions. The conjugate is purified by size-exclusion chromatography.
Concentration: 0.1 mg/ml
Storage Buffer: The reagent is provided in stabilizing phosphate buffered saline (PBS) solution containing 15mM sodium azide.
Storage / Stability: Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. Do not use after expiration date stamped on vial label.
Usage: The reagent is designed for Flow Cytometry analysis. It is recommended to use 10-15 µl of antibody conjugate per 10^6 cells (100 µl cell suspension). Since applications vary, the reagent should be titrated for each particular testing system.
Expiration: See vial label
Lot Number: See vial label
Background: Cytokeratins are a subfamily of intermediate filaments and characterized by remarkable biochemical diversity. Cytokeratins are represented in epithelial tissues by at least 20 different polypeptides, molecular weight between 40 kDa and 68 kDa. The individual cytokeratin polypeptides are designated 1 to 20 and divided into the type I (acidic cytokeratins 9-20) and type II (basic to neutral cytokeratins 1-8) families.
