| Application details   | Flow cytometry: The reagent is designed for analysis of human blood cells using 20 µl reagent / 100 µl of whole blood or 10 <sup>6</sup> cells in a suspension. The content of a vial (2 ml) is sufficient for 100 tests.                  |                  |
| Excitation laser      | blue (488 nm)                                                                                                                                                                                                                              |                  |
| Isotype               | Mouse IgG1 kappa                                                                                                                                                                                                                           |                  |
| Specificity           | The antibody SN3 reacts with CD24, a 35-45 kDa heavily glycosylated cell surface antigen. CD24 is expressed by granulocytes, B lymphocytes and by some activated T cells and T cell malignancies. It is not expressed on human thymocytes. |                  |
