

Technical Data Sheet

Product **Mouse IgG2a Isotype Control DyLight™ 650**

Cat. Number/Size **L6-724-C100 0.1 mg**

For Research Use Only.

Not for use in diagnostic or therapeutic procedures.

Clone MOPC-173

Format DyLight™ 650

Negative species Mouse, Rat, Human

Application FC (QC tested), IHC-P, IHC-F, ICC, WB

Application details Negative control: The reagent is intended as an isotype control to establish the amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 µg/ml of incubation mixture), change the conditions of your experiment to reduce the background.

Excitation laser red (633 nm)

Isotype Mouse IgG2a kappa

Specificity This mouse IgG2a monoclonal antibody (clone MOPC-173) reacts with an unknown epitope. It does not react with a variety of resting, activated, live, and fixed mouse, rat and human tissues.

Immunogen The transplantable plasmacytoma MOPC-173 was induced by intraperitoneal injection of mineral oils into BALB/c mice.

Concentration 0.1 mg/ml

Preparation Purified antibody is conjugated with DyLight™ 650 NHS ester under optimum conditions and unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.

Formulation Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide

Storage and handling Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.
