| Application details   | Flow cytometry: The reagent is designed for analysis of human blood cells using 10 µl reagent / 100 µl of whole blood or 10 <sup>6</sup> cells in a suspension. The content of a vial (1 ml) is sufficient for 100 tests.                                      |                  |
| Excitation laser      | blue (488 nm)                                                                                                                                                                                                                                                  |                  |
| Isotype               | Mouse IgG2b                                                                                                                                                                                                                                                    |                  |
| Specificity           | The mouse monoclonal antibody SAM1 recognizes an extracellular epitope of CD49e (integrin 5 alpha), a transmembrane glycoprotein expressed on thymocytes, early and activated B cells, monocytes, NK cells, dendritic cells, osteoblast and endothelial cells. |                  |
