| Application details   | Flow cytometry: The reagent is designed for analysis of human blood cells using 20 µl reagent / 100 µl of whole blood or 10 <sup>6</sup> cells in a suspension. The content of a vial (2 ml) is sufficient for 100 tests.           |                  |
| Excitation laser      | blue (488 nm)                                                                                                                                                                                                                       |                  |
| Isotype               | Mouse IgG2a                                                                                                                                                                                                                         |                  |
| Specificity           | The mouse monoclonal antibody CRIS1 reacts with an extracellular epitope of CD5, a 67kDa single-chain transmembrane glycoprotein expressed on mature T lymphocytes, most of thymocytes and B lymphocytes subset (B-1a lymphocytes). |                  |
